Education

- FPT PolyTechnic College
2021-2024
Software Engineering
Expected graduation : 8/2024
- Ly Thai To High School
2018-2021

Technical Skill

- Back End Coding (Java , SpringBoost)
- Front End Coding (HTML, CSS, JavaScript, Bootstrap, Visual Studio)
- Database Knowledge (SQL server, MySQL)

Soft Skill

- Fluency in English (Ielts 5.5)
- Communication Skills
- Problem Resolution
- Quick Learning and Adaptability
- Analytical Skills
- Logical Thinking

Trần Nguyễn Phát Đạt

Software Engineering

Profile

Passionate about advancing technology, I excel in software engineering with a focus on delivering innovative solutions. My expertise lies in developing scalable and reliable software applications, combining technical proficiency with a collaborative approach to achieve project excellence.

Experience

Obtained from hands-on projects during college program(non-exhausted)

Back-end Development Project - E-commerce Website

1/2023- 4/2023

- Back-End Development**
Objective: Ensure system stability and performance through automation.
Language/Framework: Use Java with Spring Boot for improvement.
- Database Management** : Using MySQL for efficient data handling and benefit analysis.
- Front-End Collaboration :**
- Cooperation:** Ensure seamless integration with HTML, CSS, and JavaScript for user-centric solutions.
- Bootstrap Experience:** Proficient in leveraging Bootstrap for flexible and responsive user interfaces, optimizing user experience and development speed.
- Bootstrap Experience:** Proficient in leveraging Bootstrap for flexible and responsive user interfaces, optimizing user experience and development speed
- Angular Competence:** Skilled in using Angular to develop robust and maintainable web applications, including reusable UI components and performance enhancements
- Performance Optimization :** Optimize system performance and conduct regular maintenance to streamline workflows.
- Results :** Build a flexible, stable online shopping platform to meet business and user needs, informed by competition research and best practices in information technology.

Student Management Application

9/2023- 1/2024

- Functionality - Java :** Implement core functionalities, including account management and information display, using Java.
- Database Integration:** Integrate a database (e.g., MySQL, SQL server) to store student and course-related data.
- Overall Integration:** Connect the user interface with Java functionality to create a cohesive and adaptable application.
- Safety and Security:** Implement safety measures in both the user interface and Java functions to ensure data protection.
- Development of Digital Processes :** Utilize HTML, CSS, JavaScript and Bootstrap for an engaging and interactive user interface.
